

~~Abstract~~ ABSTRACT OF THE DISCLOSURE

~~Method for receiving or transmitting messages~~

~~The use of shortened spreading codes,~~  
especially in the paging channel, for the purpose of  
correlation in <sup>the</sup> reception of CDMA signals, provides  
for power-saving measures such as, for example, the  
intermittent turn-off of A/D converters or correlators.

To preserve the orthogonality of the spreading codes,  
and ~~the~~ spreading codes used <sup>are</sup> ~~must be~~ selected in such a  
manner that, if possible, they do not correlate with  
the paging channel spreading code.
